Resin/Dextrin Lay-Flat Litho Lamination Adhesive

## The Ideal Hybrid Adhesive Solution for Your Litho Lamination Jobs

**ResDex gives you the best characteristics of both major types of litho lamination adhesives:** The lay-flat ease of use of dextrin, combined with the faster tack of a resin-based adhesive. Formulated to handle a wide range of applications and stock thicknesses, ResDex is a problem-solver for your litho lamination projects.

**ResDex also helps maintain a warp-free system** that can be encountered with many Synthetic resin emulsion systems. ResDex contains humectants which help balance the moisture during drying between the litho sheet and the corrugated board.

**With ResDex, cleanup is a breeze,** and the neutral pH of the product means that the neoprene bands on your Automatan will last longer, reducing downtime and repairs.

**ResDex costs less, and you use less:** ResDex can reduce your adhesive costs 10-20% compared to resin-based adhesive at the same coverage rates. Additionally, you can apply about 25% less ResDex compared to dextrin-based adhesive (as low as 6 lbs. ResDex per M.S.F compared to 8-9 lbs. dextrin per M.S.F).

**Contact us to receive a free trial sample** of ResDex to test on your next production run.

### Key ResDex Benefits:

- Faster Machine Operating Rates
- Reduce Warp
- Faster Drying Times
- Reduced Materials Cost
- Reduced Maintenance of Bands on Laminator

Experience. The Difference.
